PIPELINE FLUID MANAGEMENT

APPLICATIONS

- Stand-Alone Separation and Filtration for Gas and Liquid
- Water Treatment Services for Discharge
- Terminals and Tank Farm Cleanup
- Pipeline Commissioning, Decommissioning and Abandonment
- Fluid Handling – Flushing/Circulation/ Capture/Filtration
- Pipeline Equipment Rentals
- Project Management

PIPELINE FLUID MANAGEMENT

PIPELINE SERVICES

CETCO Pipeline Services provides a variety of solutions to the pipeline industry. Using specialized mobile equipment, and highly trained personnel, we provide unique and cost-effective solutions to our clients. CETCO provides services covering all stages of fluid handling; from pumping, circulation, flooding, and testing to fluid capture with pressurized retention. We also offer multiple stage separation of flowing fluids or products, which can be filtered for on-site discharge, flared, and/or captured for offsite fluid disposal.

QEHS

CETCO considers its highest priorities to be incident prevention, employee safety, and environmental protection. In addition, CETCO is committed to being an industry leader in all of its offerings by focusing on quality of service and customer satisfaction. A workplace strong in safety principles will demonstrate its strength through quality and efficiency. At CETCO ENERGY SERVICES, our goal is nothing short of zero injuries.

COMPETENCY TRAINING

CETCO employees undergo extensive safety, regulatory, and Operational Excellence training programs in both classroom and hands-on settings. Upon completion of our vigorous education programs, our employees are capable to perform their particular disciplines. Through reinvestment in our most important asset, our people; we ensure that our personnel are equipped with the knowledge, skills, and abilities to execute your job successfully.

EQUIPMENT AND MAINTENANCE

CETCO is proud to offer a vast inventory of vessels and support equipment for both onshore and offshore applications. We have an extensive assortment of coded vessels, specifically designed to handle hazardous flow streams. Only highly qualified personnel maintain and operate our equipment. To ensure reliability and customer satisfaction, we document the working history on all our equipment. Upon returning from each project, a series of QAQC procedures are performed to ensure all equipment meets the integrity of our high-performance standards.

PIPELINE FLUID MANAGEMENT

TEMPORARY PIPING

Pipe may seem inconsequential, but it is always necessary. CETCO provides temporary piping to interface temporary equipment to permanent equipment for maintenance operations. CETCO can provide pipe ranging from 2" to 10" including hammer union and flanged iron accommodating a wide range of desired flow rates.

SEPARATION OF PRODUCT STREAM

In cases where maintenance pigging on pipelines is being performed, high – pressure mobile separators are often needed to ensure debris does not pass into the pipeline system or station. CETCO has a large fleet including HP separators and FilterSeps ready for these projects.

PIPELINE BLOW-DOWN

Pipelines being evacuated for repairs or decommissioned may require the operator to blow-down the pipeline of all product. For such operations, CETCO uses its separator and flaring system to safely remove hydrocarbons from the pipeline. We have a range of mobile flares available to meet your repair and decommissioning needs.

PUMPING SERVICES

CETCO offers pumps for filling, testing and dewatering operations.

MOBILE FILTRATION FOR DRY PIGGING

During dry pigging operations, mobile filtration is used to remove dust and other solid debris from pipelines to ensure the debris does not continue into other parts of the pipeline system.

WATER FILTRATION SERVICES

CETCO provides high-capacity treatment solutions capable of filtering large volumes of contaminated water from pigging, hydrotesting, and commissioning activities, enabling compliant discharge.

OPERATIONS

CETCO understands that proper safety measures, informed decision making, and experience are critical to performance. Because of this, all service personnel have been certified under DOT's Operator Qualification program and are highly-trained, field-experienced professionals ready to work for your success.

ENGINEERING & PROJECT MANAGEMENT

ENGINEERING & PROJECT MANAGEMENT

CETCO's Engineering & Project Management team design and optimize each project to meet objectives effectively and efficiently. Our Project Management team can expertly design a unique and cohesive system to safely and effectively meet your objectives and comply with government regulations. Our experienced engineering team can provide P&IDs, process flow diagrams, SAFE charts, procedures, SEMS compliance, and performance calculations. Our team includes certified project managers (PMP) and engineers (P.E.) to help design the best system for your application.

CETCO PIPELINE EQUIPMENT

PIPELINE EQUIPMENT

CETCO has a large inventory of well maintained and designed vessels, and support equipment, including:

- High Pressure Separators
- Low Pressure Separators
- Single Service FilterSep
- Dual Service FilterSep
- Liquid Service FilterSep
- Manifolds
- Flare Stacks & Flare Booms
- Piping and Valves
- Pumps
- Atmospheric Tanks
- Pressurized Tanks
- Flanged Pipe

EQUIPMENT RENTAL

CETCO has a large and diverse fleet of pipeline equipment available for rent, with or without personnel. Our fleet of specialized and adaptable equipment can perform the most complex and challenging jobs.
