

VICRON[®] (Lucerne Valley, CA)

fine ground calcium carbonate

The VICRON[®] series of fine ground limestone represents a full range of high calcium limestone products for general purpose filler applications. VICRON[®] limestone products are characterized by their controlled particle size, low surface area, high brightness and low oil absorption relative to other industrial minerals. They find use as extenders and property enhancers in paint and coatings formulations, thermoplastic and thermoset polymers and many types of building products.

Uniformity is insured by the careful control of all processing conditions. These VICRON[®] products are manufactured from a high quality deposit of limestone located in Lucerne Valley, CA, and therefore, have consistent chemical and mineralogical composition.
