Well Testing

**Crude Oil Burner**

**4,000 GREEN BURNER**

The GREEN Burner is a field-trialed and proven technology within CETCO’s Well Testing Division. It is a crude oil atomizer designed for temporary well test applications; and the operational economics of these applications benefit disposal of oil rather than the sale of oil.

The atomizer may be affixed to our Dynamic Flare Booms in 45’ – 65’ – 85’ configurations for offshore use or through a tripod for land use. Each atomizing head can burn up to 4,000 bpd depending on the gravity of the well effluent and air supply. Multiple atomizers may be rigged up in parallel to increase burn rates.
