Early Production Facilities/Systems

CLEAR SOLUTIONS

for complex fluids

Successfully set up, operate and maintain early production facility that delivers 10,000 bbls per day

CHALLENGE

- Customer wanted to produce and sell their oil quickly, but had no production facility

SOLUTION

- Design and implement a state-of-the-art temporary production facility

RESULTS

- Increased, reliable revenues from producing and selling 10,000 bbls/day of oil

SUCCESS STORY

Well Testing
Water Treatment & Filtration
Solids Management Systems & Technologies
Early Production Facilities/Systems

Successfully set up, operate and maintain early production facility that delivers 10,000 bbls per day

CHALLENGE

Unable to degas their oil, a customer at the River State, Nigeria facility experienced a discrepancy in their production figure and was unable to produce their oil for sale.

CETCO SOLUTION

CETCO Energy Services (CETCO), River State, Nigeria facility developed a temporary production facility, with higher capacity separator and a Surge Tank with more retention time at lower pressure that reduced the shrinkage factor to near one.

RESULTS

Customer now produces and sells 10,000bbls/day of oil, generating a steady cash flow. These new revenues can now also be used to purchase the equipment needed to set up a new production facility for future business growth.
