

LEONARDITE-RICH GRANULES AND POWDERS

AGRO-LIG® is a naturally occurring Leonardite from Gascoyne, North Dakota. AGRO-LIG is used to boost yield by improving soil characteristics. It is especially effective in soils with low fertility, low organic matter, high alkalinity and high salinity. AGRO-LIG is easily incorporated in the soil. Consistent use improves soil structure and organic content.

AGRO-LIG features:

- OMRI Certified Organic Input Material – no harsh chemicals used in manufacturing process
- Gascoyne, North Dakota, USA Leonardite – recognized as the world's best source
- Naturally concentrated humic, fulvic and ulmic acids
- High purity – low in regulated contaminants
- A low pH of 4.0-5.0
- Consistent quality since 1958

AGRO-LIG benefits:

- Rejuvenates low fertility, low organic matter, high alkalinity and high salinity soils
- Improves long-term soil health
- Increases nutrient uptake in plants
- Promotes stronger, healthier plants
- Improves crop yield and quality
- Increased profit to growers

AGRO-LIG is offered in:

- Granular
- Powder
- Ultra-Fine Powder
- Natural
