To Our Customers:

Re: Shelf Life

Specialty Minerals Inc.'s Precipitated Calcium Carbonate (PCC) products are manufactured from natural limestone, which is a stable inorganic mineral. When the powder products are stored in dry conditions at ambient temperatures (avoiding extremes to prevent condensation), they will not have an expiration date (indefinite shelf life).

We recommend that the ViCALity® SG (Food Grade dry PCC product) is tested after five years of storage to ensure that it still meets the intended user requirements.

PCC Slurry products must be kept agitated while on storage. We recommend verifying their condition after 90 days.

If you have any additional questions, please feel free to contact me at (413) 662-9968.

Sincerely,

*Parvin Golbayani*
